

# Do You Need VoIP? (A 10-Step Checklist)

Are you wondering if you need to set up VoIP for your business? Mark which options below fit your company to see if you need VoIP.

- Your business makes a lot of long distance or international calls.
- You have a distributed workforce and need a way to connect employees who are working remotely or in different locations.
- You want to streamline your communication system and have everything in one place.
- You need to scale your business quickly and don't want to be held back by your phone system.
- You want to take advantage of advanced features like call forwarding, voicemail to email, and virtual meetings.
- You are using an outdated phone system that is difficult to maintain or upgrade.
- You want to be able to access your phone system from any device, anywhere.
- You need to be able to make calls even if your internet connection goes down.
- You want to reduce your carbon footprint and reduce your reliance on traditional phone lines.
- You want to take advantage of cost savings and increased productivity that a modern phone system can offer.

## 1-3 Checkmarks

You have a slight need for a VoIP phone system, but can still survive with a regular landline.

## 4-6 Checkmarks

It's a good time to start learning more about VoIP. Your business already has the need for a better phone system than you already have.

## 7-10 Checkmarks

You're a perfect fit for a VoIP system. It's best to start shopping around for a reliable VoIP provider and to get a quotation for VoIP for your business.
